CAREER SUMMARY

Results-driven **Data & Analytics Engineer** with **3 years of experience** designing and optimizing production-grade data workflows**,** ETL pipelines, and analytics platforms. Adept at leveraging **Python, SQL, Power BI, and automation frameworks** to enable data-driven decision-making and operational intelligence. Passionate about workflow automation, scalable data solutions, and data quality governance, with proven experience translating complex operational challenges into **high impact analytics and automation systems**.

WORK EXPERIENCE

Data Analyst / Automation & Operations Lead - ACCENTURE **Nov 2022 – Present**

LOGAN – Network Log Analysis & Automation Platform

- Designed and built **LOGAN**, **a Python and Django-based web application** to automate network **log analysis** for drive test and **network validation activities**.
- Automated **ingestion, parsing, and analysis** of logs related to **OTT, HTTP, YouTube, Voice, and M2M services**, eliminating manual inspection.
- Implemented **success/failure detection logic** with actionable remediation insights for engineers.
- Enabled **result visualization**, **data downloads**, and **structured troubleshooting workflows** through a unified platform.
- Used as both an **analytics and operational enablement tool**, improving engineer productivity and troubleshooting accuracy.

Automation & Analytics Enablement Program

- Led the design and delivery of **end-to-end automation and analytics accelerators** across operations, eliminating repetitive, error-prone manual workflows.
- Built **Python-based automation tools** and Excel automation solutions using **PyQt** and **Tkinter** to standardize operational tracking, reporting, and validation across teams.
- Designed and implemented a **Quality of Service J+5 Automation & KPI Advancement Framework**, evaluating multi-day KPI readiness (Day 1-5 OK, NOK, degraded states). Implemented **rule-based logic** to automate QoS banner **advancement eligibility** and **commercially open** decision workflows, replacing manual validations.
- Delivered **GF automation** to streamline operational governance flows, ensuring consistent execution, tracking, and auditability.
- Mentored junior team members on **automation design, analytics logic, and scalable solution development**, driving adoption of best practices across teams.

Bytel | End-to-End Data Workflow & Power BI Analytics Platform

- Designed and delivered a **fully automated end-to-end data workflow**, from **Elixir-based daily snapshots** through **email ingestion** to **Python-based transformation pipelines**. Automated **email-based data parsing, validation, and transformation** to generate **structured**, **analytics-ready datasets** with minimal manual intervention.
- Built **centralized operational trackers** with **deduplication logic, delivery status computation**, and **hold tracking** to maintain a **single source of truth**.
- Consolidated **multiple enterprise data sources** (**Elixir outputs, SharePoint, Excel, SQL**) into unified and scalable **analytical data models**.
- Designed and deployed **Power BI dashboards for KPIs, performance trends, quality metrics**, and **productivity analysis**.
- Enabled **historical snapshots**, **audit traceability**, and **near real-time visibility, eliminating manual consolidation** and **Excel-based reporting**.

Bytel | Operations Analytics & Team Leadership (Reglage 5G)

- Led analytics and reporting for large-scale **5G telecom operations**, ensuring delivery quality, SLA adherence, and operational governance.
- Defined and implemented **operational KPI frameworks** covering productivity, quality, delivery status, and escalation tracking.
- Acted as the **single point of contact (SPOC)** between engineers, operations teams, stakeholders, and leadership.
- Established structured reporting, review cadence, and governance dashboards to improve delivery predictability.
- Combined hands on operational ownership with analytics leadership and team management.

AI / Copilot-Style Analytics Assistants & Automation

- Designed and implemented **rule-driven, Copilot-style analytics assistants** for **process guidance** and **troubleshooting**.
- Embedded **analytics recommendations** directly into **operational workflows**.
- Reduced dependency on **senior engineers** by enabling **guided, self-service analytics**.
- Improved **onboarding speed** and **operational consistency** across teams.

TECHNICAL SKILLS

Data & Programming	Analytics & BI	Data Engineering & Automation	Applications & Platforms
Python (automation, analytics), SQL, Excel & Google Sheets (Power Query, automation)	Power BI (DAX, data modeling, dashboards, Service), KPI reporting, trend & variance analysis, data validation	ETL workflow design, data consolidation, process automation frameworks, API integration, log-based analytics	Django, PyQt, Tkinter, SharePoint, Power BI Workspaces & Apps, internal enterprise tools

EDUCATIONAL QUALIFICATIONS

BTECH- Mechatronics Engineering	Hindustan Institute of Technology and Science, Chennai, Tamil Nadu	2022	CGPA: 7.9
Class XII	Revoor padmanabha chetty, Chennai, Tamil Nadu	2018	82%

AWARDS & RECOGNITION

Corporate – Accenture	Received Best Associate Award for demonstrating strong ownership, adaptability, and consistent high performance across deliverables.
Corporate – Accenture	Received Popular Choice Innovation Igniter Award for consistently sparking innovative ideas that inspire the team and elevate the way of working.
